

# APBA Football Roster

# 2014 Pro Season

The following players comprise the 2014 season APBA Football Player Card Set. The regular starters at each position are listed first and should be used most frequently. Realistic use of the players below will generate statistical results remarkably similar to those from real life.

**IMPORTANT:** When a Red "K" appears in the R-column as the result on any kind of running play from scrimmage or on any return, roll the dice again, refer to the K-column, and use the number there for the result. When a player has a "K" in his R-column, he can never be used for kicking or punting. If the symbol "F-K" or "F-P" appears on a players card, it means that you use the K or P column when he recovers a fumble. Players in red have an individual card in the F 2014 Pro Set.

The following players comprise the 2014 season APBA Football Player Card Set. The regular starters at each position are listed first and should be used most frequently. Realistic use of the players below will generate statistical results remarkably similar to those from real life.

**IMPORTANT:** When a Red "K" appears in the R-column as the result on any kind of running play from scrimmage or on any return, roll the dice again, refer to the K-column, and use the number there for the result. When a player has a "K" in his R-column, he can never be used for kicking or punting. If the symbol "F-K" or "F-P" appears on a players card, it means that you use the K or P column when he recovers a fumble. Players in red have an individual card in the F 2014 Pro Set.

The optional defensive rule where the defense correctly identifies the ball carrier results in reading the number two lines below the card number does NOT apply to this season. The current offense environment of pro football makes this option unfair to the offense.

**OPTIONAL TIMING RULES:** After each team is a number in (Js. This is the team's play rating. In this new system, you add the play rating of each team together and then divide by four to get the plays per quarter. For example, Denver is playing New England. Denver's play rating is 75 and New Englands is 75. The play per quarter is 38.  $(75+75)/4$ . Always round up.

**Additional step,** if you want, roll two dice and add the result together (a 2-12 result). Consult the following chart to determine the adjustment to the figure calculated above. This dice roll is done before every quarter.

Dice Roll	2	3	4	5	6	7	8	9	10	11	12
Adjustment	-2	-2	-1	-1	0	0	0	1	1	2	2

Continuing the Denver New England example, a 5 is rolled. The plays for this quarter would be 37 (38-1). This is an optional system to account for the increased number of plays in the current era of football. In no case should the number of plays be less than 30 per quarter.

To determine the play rating for other teams, you calculate the sum of that team's runs, passes, sacks, punts, kickoff returns and field goal attempts. This amount is divided by the number of games played. Always round up.

For teams that employ the "read/option" concept as part of their standard offense, the quarterback can also be used as a runner on the outside running play (similar to a halfback or fullback). Examples of these teams include 2013 Seattle and many college football teams.

With the increase use of the "Jet Sweep," a slot receiver goes in motion and receives a handoff from the quarterback, this play is not a trick play but a designed outside run. APBA has created a new position (EB/HB). If an EB has 10 or more runs in a season, he will be graded (EB/HB- numerical rating). An EB/HB is not subject to the limits on trick plays.
