

# APBA Baseball for Windows Update 6.1

02/12/2025

APBA Baseball for Windows 6.1 is an update for APBA Baseball for Windows 6.0. As this is an update for BBW 6.0, it is necessary to have BBW 6.0 installed.

Updated files for Advanced Draft, League Manager, and the Baseball game are included in the update. StatMaster is not included as it did not require any updates and will remain showing as 6.0.

The updates are:

- 1) Baseball - The "Who" button on the lineup dialog visibility was restored.
- 2) Baseball - Player fatigue "letter" ratings, to the left of player names on lineup dialogs, were missing. Restored.
- 3) Baseball - Menu item "Options=>Display" was not loading option settings. Fixed.
- 4) Baseball - "Announcer and Sounds" dialog was revamped. The sliders on the sound level controls had undergone a change in Windows 11 and were not visible until the mouse hovered over them. The controls were replaced.
- 5) League Manager - Two-way player menu item was enabled when a protected organization was loaded. Disabled the menu item.
- 6) League Manager - Reports for game and day starting pitchers - formatting issues corrected.
- 7) League Manager - Access violation when exporting the schedule to a .CSV file. This occurred in an organization with teams that were not included in a league. An access violation would also occur when importing a .CSV schedule under the same conditions. It's been this way since BBW 4.0. Fixed.
- 8) League Manager - An updated fix was installed for Early 21st Century pitcher durability and recovery setting.
- 9) Advanced Draft - Importing/exporting a single player to a different organization failed with a message stating "Cannot import/export 2-way players" when the player was not a 2-way player. Importing/exporting multiple players was OK - as long as a 2-way player was not included in the group of players. Fixed.
- 10) Standard boxscores - Now list walks before strikeouts.
- 11) Boxscores not showing BBW 5.75 Update and Play-by-Play numbers. Fixed.

**Note:** BBW 6.x has not had any supplemental Play-by-Play updates so boxscores created in BBW 6.x will only show the version number of BBW 6.x.

Boxscores created in BBW 6.0 did not have internal BBW version numbers set in them. Those Boxscores, created in BBW 6.0, when viewed in BBW 6.1, will not show a version number. BBW 6.1 has the version number set internally.
